

TITLE: European Reference Network on rare endocrine conditions (Endo-ERN)	
FUNDING BODY:	European Commission - EU4Health programme 2021-2027
CALL:	EU4H-2023-ERN2-IBA
GRANT AGREEMENT:	10115649512
PROJECT MANAGER:	Prof. Violeta Yotova, MD, PhD, DSc
DURATION:	2023 – 2027

Summary:

The European Reference Network on rare endocrine conditions (Endo-ERN) aims to improve access to high-quality healthcare for patients with rare hormonal disorders. For this purpose the education of Reference Centres (RCs) across Europe will be supported and developed to ensure that the best possible care is made available to patients locally.

Due to the intrinsic features of hormone action and the genetic basis of some conditions, the consequences of endocrine conditions are usually not restricted to a single organ, but instead overlap in multiple organs. Endocrine disorders also often span across the entire lifetime of a patient. Therefore it is of vital importance that the unmet needs of this patient group are met by an overarching network with a broad expertise covering all endocrine glands and challenges from birth until adulthood.

Endo-ERN's mission is to reduce and ultimately abolish inequalities in care for patients with rare endocrine conditions in Europe through facilitating knowledge sharing and related healthcare and research. Endo-ERN provides equality between paediatric and adult patients.

It aims to shorten the patient pathway by increasing awareness amongst healthcare professionals on endocrine conditions and shorten the delay in diagnosis through the facilitation of expert consultation and tele-medicine. On top of that Endo-ERN aims to empower patients through, among others, education and training of delegates.
