

### Fund “Nauka” Project № 11006 Resume

“Investigation of the effects of aqueous extract of the leaves and aqueous-alcoholic extract of wood sumac (*Cotinus coggygria*) in experimental models of liver toxicity, ulcerogenesis and inflammation in rats”

**Project leader:** Prof. Diana Ivanova, PhD, DSc

The effects of aqueous infusion from leaves and ethanol infusion from heartwood of smoke tree were studied for the first time in three acute models of tissue damage by oxidative stress in rats: paracetamol-induced hepatotoxicity, indomethacin-induced ulcerogenesis and carrageenan-induced inflammation of hind paw.
