

## REFERENCES

References should follow the standards summarized in the NLM's International Committee of Medical Journal Editors (ICMJE) Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals: Sample References ([www.nlm.nih.gov/bsd/uniform\\_requirements.html](http://www.nlm.nih.gov/bsd/uniform_requirements.html)) webpage and detailed in the NLM's Citing Medicine, 2<sup>nd</sup> edition ([www.ncbi.nlm.nih.gov/books/NBK7256/](http://www.ncbi.nlm.nih.gov/books/NBK7256/)). These resources are regularly updated as new media develops, and currently include guidance for print documents (journal articles, books or other monographs); unpublished material; audio and visual media; material on CD-ROM, DVD, or disk; and material on the Internet (url, DOI, database).

References should each be numbered and ordered sequentially as they appear in the text. In the list of references, papers should be listed numerically.

The following basic examples illustrate the format to be used:

Abbreviations of journal titles should follow those listed in the Index Medicus (<http://www2.bg.am.poznan.pl/czasopisma/medicus.php?lang=eng>). Responsibility for the correctness of the references lies with the author(s). After the manuscript revisions, authors should double check that all in-text citations are in the reference list and that all references on the reference list have at least one corresponding in-text citation.

NOTE: If there are any references the original titles of which are in a non-Latin alphabet, they should be translated or transcribed. At the end, in brackets, there should be the original language, e.g. (in Bulgarian).
